

FOOTHILL COLLEGE

2010-2011 High School Participation Methodology

Student Population

The data sheets include high school graduates who graduated between January 1, 2010 and October 31, 2010. Additionally, if students identified on their admissions application that this is their first time attending college or their first time attending Foothill College, they were included. Concurrently enrolled high school students were not included.

Enrollments include those high school graduates who enrolled at Foothill College in summer 2010, fall 2010, winter 2011, and spring 2011. Therefore these data sheets cannot be compared to the high school participation rates which are fall enrollment only.

Demographics

Ethnicity, Residency Status, Educational Goal, and Enrollment Status may result in duplicate counts of students as they may update their status from quarter to quarter.

For example, if a student is part-time in the fall, then full-time in the spring, they now have two different enrollment status records, therefore their status is included in both status types over the year.

Course Success/Non Success

Course success rates include all grades received in any course at Foothill College over the academic year. Students who drop a course without receiving a grade are not included.

The success rate is the number/percent of students who received a passing grade in a course (A, B, C, P). Non success is the number/percent of students who received a non passing grade over the year (D, F, NP, I).

Withdraw is the number/percent of students who withdrew and received a W grade. The total is the total number/percent of students who received any grade in any course over the year.

Math and English Enrollment & Success

Math and English enrollment includes any student who enrolled in a collegiate math or English course or a pre-collegiate math or English course over the academic period. Their success in the course is also included.
